Emergency Communication System

Emergency Communication System

ECS-550

The ECS-550 is a multipurpose emergency voice evacuation panel that may be used for fire applications, mass notification applications or both. This state-of the-art ECS-550 is capable of producing 50 or 100 watts of audio power that can be distributed up to eight speaker circuits (i.e., zones). The ECS-550 comes standard with a single speaker zone output and a built in 25Vrms, 50 watt amplifier. A secondary 50 watt amplifier (ECS-BD50-25V/70V) can be added for backup purposes or for an additional 50 watts of audio power that will be allocated across available speaker zones. In addition, an optional ECS-CE6 module can be added to the ECS-550 to upgrade the system to include a maximum of eight speaker zone outputs. Other key messaging features include the ability to record up to fourteen field programmable messages (up to 60 seconds each) by using an integral microphone or from an external audio source.

Silent Knights fully supervised external data bus on the ECS-550 allows for the connection of up to eight control devices and eight distributed audio circuits that provide a maximum of up to 24 speaker circuits to meet the needs of even the largest and most complex installations. The ECS-550 is capable of supporting most retrofit applications by providing a speaker circuit output of 70.7Vrms with the addition of a built in amplifier converter (ECS-XRM-70V) or by adding a additional secondary 70.7VDC amplifier module (ECS-BD50-70V). Independent backup amplifier protection re-routes power to a backup amplifier in the event of a primary amplifier failure.

The ECS-550 offers the flexibility to be used as an adjunct (slave) to most UL listed FACPs or as standalone unit to provide fire protection and emergency voice evacuation. As an added benefit for fire alarm applications, an on-board, fully supervised Notification Appliance Circuit (NAC) provides 2.0 Amps of synchronized NAC power while supporting most synchronization protocols. In addition, the ECS-550 can be activated by a building's Private Branch Exchange (PBX) by using the integral Night Ring feature. To activate the ECS-550 remotely from any location, the ECS-RTZM option module provides secure access to the system via cell phone or other remote telephone.
