

Lakeside Nursing and Rehabilitation Center

Silent Knight IFP-1000VIP Addressable Fire Control Panel Chosen for Lakeside Nursing Rehabilitation

Silent Knight has brought its world-class fire detection and alarm systems to the Lakeside Nursing and Rehabilitation Center, the largest privately owned nursing home in Wisconsin. The Lakeside is located along the shores of Lake Wissota and offers rehabilitation services, Alzheimer/Dementia care, long-term care, and a full range of therapies.

An IFP-1000VIP Addressable Fire Control Panel and 5496-power expander were installed at the facility. Lack of parts for the existing fire alarm system, new fire codes and troubles with the existing product facilitated the customer's search for a new fire alarm solution. The Silent Knight IFP-1000VIP was chosen for the installation because of its modular expansion capabilities the fire alarm and voice evacuation system is scalable - allowing the system to grow as the Lakeside does.

According to Carter Rierson, president of Best Defense Security & Fire Protection in Madison, WI, "The advanced zoning provided by the IFP-1000VIP allowed us to provide an annunciator at each nurse station so that nursing staff is quickly alerted to the exact device needing attention." Lakeside management is pleased with the system because it is so easy for nurses to monitor fire alarms right from their stations.

The IFP-1000VIP from Silent Knight is ideal for a variety of jobs including small-to-mid size universities, office buildings, manufacturing facilities, shopping centers and other institutions.
